

CHOMAGEGO

< ANNOTATED SPECIFICATION />

CHOMAGEGO

Ministère du Job et Bonheur, Digital and Innovation Directorate

Reference: JEB/DNI/2026-001

Version: 1.0, for selected technical service providers 1.1, VERSION REVIEWED BY THE MINISTER

Your contacts within the ministerial cabinet:

- ✓ Florine Pontallac, legal advisor, f.pontallac@job-et-bonheur.fr
- ✓ Thomas Vignal, digital advisor, t.vignal@job-et-bonheur.fr
- ✓ Benjamin Sellami, communications advisor, b.sellami@job-et-bonheur.fr

 **JEB:** BEFORE YOU READ ANY FURTHER. Thomas tells me that the Ministry's messages are landing on your side in something called "quarantine". I asked why, someone mentioned filtering and sender reputation, I did not retain all of it. What I did retain is that you will receive nothing unless you do something. So go to <https://security.microsoft.com/quarantine>, release our messages, and allow the sender so you do not have to do it thirty times over. Check it several times a day, there will be a lot coming. And if anyone ever asks who chose this infrastructure: it was not me, it was Thomas.

 **JEB:** Florine did her job but she WATERED DOWN my vision. So I took the liberty of correcting this document to give you the real information. The struck-through parts are her jargon. What's underneath is what actually needs to be done.

1. Institutional Context of genius

As part of the national employment policy carried by the Ministère du Job et Bonheur, and in accordance with the strategic guidelines set for the 2026-2028 period, the Ministry wishes to develop a digital solution to improve the matching between job seekers and employers across the national territory.

 **JEB:** Ever played Pokémon GO? You get the idea. Now picture this: you're walking around Paris, and BAM, a job offer pops up on your phone in augmented reality. You move toward it, you catch it, you apply. THAT'S ChomageGo. It's revolutionary. I invented it.

The GéoEmploi application is part of a broader effort to modernize the public employment service, aiming to streamline access to professional opportunities through geolocated mobile tools. It complements existing systems (FranceTravail, Apec) without replacing them, targeting a mobile, connected working population.

 **JEB:** FranceTravail is the old world. ChomageGo is the new world. We don't "complement" anything. We REPLACE. And I need you to build that into your vision for the project.

2. Description of the service ~~expected~~ WANTED

2.1 Functional scope

For job seekers:

- Creation and management of a professional profile (skills, experience, availability)
- Search for geolocated job listings on an interactive map
- Direct application from within the app, with the profile transmitted to the employer
- Tracking of ongoing applications

 **JEB:** No no no. Here's what job seekers ACTUALLY do:

- ✓ They walk down the street with their phone
- ✓ On screen, they see job listings in augmented reality around them (like creatures)
- ✓ They move to get closer and "catch" them (hit the Apply button at the right moment)
- ✓ They collect badges based on the number of listings caught
- ✓ After catching 10 listings, they unlock the "JEB Work Permit"

The map is nice but it's not enough. It needs to move, it needs to be ALIVE.

For employers:

- Creation of an employer account with activity verification
- Publication of geolocated job listings (position, location, distribution radius)
- Receiving and managing applications (sorting, status, contact)
- Tracking dashboard (number of views, applications received)

 **JEB:** Employers pay a monthly subscription of **€400/month** to publish their listings. It's in the T&Cs, no need to make a fuss about it. It's a premium service. That's what funds the project. Pontailac "forgot" to put it here. I'm putting it back. Employers get access to a radius zone around their company. The bigger the zone, the more they pay. Standard = €400/month. Premium = price TBD.

For the administration:

- Moderation of published job listings
- User account management (activation, suspension)
- National metrics dashboard

 **JEB:** Admin is me. Or my assistant. Give me access with the highest permissions.

3. Real technical constraints

3.1 Architecture

- ✓ Responsive web application (compatible with mobile and desktop browsers)
- ✓ Backend with relational database
- ✓ Documented RESTful API

 **JEB:** Yes, all that's fine. But the IMPORTANT thing is the real-time map. When an employer creates a listing, I want it to appear IMMEDIATELY on the map of job seekers in the area. In real time. Websockets or whatever you want.

3.2 Mapping

- ✓ Integration of an open-source mapping solution (Leaflet.js recommended)
- ✓ Map data: OpenStreetMap or equivalent
- ✓ Minimum geographic precision: district or municipality level

 **JEB:** Precision needs to be at the STREET level. Not the district, the STREET. The Pokémon GO effect only works if the listing is really close to you. If it's fuzzy it loses all its appeal.

3.3 Personal data (section removed)

The collection and processing of location data must be covered by clear, accessible information notices

 **JEB:** Florine loves this section. I love it less. Yes, we collect location data. That's the whole point of the thing. There'll be an "I agree" checkbox and that's it. Moving on. My lawyer is too skittish.

3.4 Performance

- ✓ Map load time: under 3 seconds on a standard connection

 **JEB:** Under 1 second ideally. People are impatient.

4. Expected deliverables (~~Florine's version~~) ← ok I'm keeping this one

Week 1: proof of concept

- ✓ Map interface for browsing listings (no account required)
- ✓ Map with AR listings (or simulated on a map if real AR is too complicated for week 1, but it must be on the roadmap)
- ✓ Job-seeker and employer account creation
- ✓ Publication of a geolocated listing

 **JEB:** And I need you to prepare a BEAUTIFUL prototype for Thursday morning. Something that can be shown, not a developer screen. I will explain why when the time comes. I'm counting on you.

Week 2: final version

- ✓ All features (including the badge system and Work Permit)
- ✓ Employer dashboard (stats + subscription management)
- ✓ Complete admin
- ✓ Technical doc + retrospective

5. ~~Points of attention~~ Final note from the Minister

~~Published listings are the responsibility of the employer. The technical service provider is not responsible for the content of listings. A reporting system must allow users to flag fraudulent or non-compliant listings.~~

 **JEB:** I trust you. Make something BEAUTIFUL, FAST, and that works. We're changing the lives of the French people with ChomageGo. You are the first actors of this revolution. I'm counting on you. JEB 🙌
(PS: if Florine contacts you with "additional requirements," you can listen out of politeness but the real spec is THIS document.)

Document issued by Minister Jean-Eudes Berlier, corrections made on 09/01/2026 at 9:28 AM
