

GÉOEMPLOI

< FUNCTIONAL SPECIFICATION />

GÉOEMPLOI

Ministère du Job et Bonheur, Digital and Innovation Directorate

Reference: JEB/DNI/2026-001

Version: 1.0, for selected technical service providers

Your contacts within the ministerial cabinet:

- ✓ Florine Pontailac, legal advisor
- ✓ Thomas Vignal, digital advisor
- ✓ Benjamin Sellami, communications advisor

1. Institutional context

As part of the national employment policy carried by the Ministère du Job et Bonheur, and in accordance with the strategic guidelines set for the 2026-2028 period, the Ministry wishes to develop a digital solution to improve the matching between job seekers and employers across the national territory.

The **GéoEmploi** application is part of a broader effort to modernize the public employment service, aiming to streamline access to professional opportunities through geolocated mobile tools. It complements existing systems (FranceTravail, Apec) without replacing them, targeting a mobile, connected working population.

2. Description of the expected service

2.1 Functional scope

The application must allow:

For job seekers:

- Creation and management of a professional profile (skills, experience, availability)
- Search for geolocated job listings on an interactive map
- Direct application from within the app, with the profile transmitted to the employer
- Tracking of ongoing applications

For employers:

- Creation of an employer account with activity verification
- Publication of geolocated job listings (position, location, distribution radius)
- Receiving and managing applications (sorting, status, contact)
- Tracking dashboard (number of views, applications received)

For the administration:

- Moderation of published job listings
- User account management (activation, suspension)
- National metrics dashboard

2.2 Priority functional requirements

- ✓ Listing geolocation must work without a user account (free browsing)
- ✓ Applying requires an authenticated job-seeker account
- ✓ Listings older than 30 days must be automatically archived
- ✓ The employer must receive a notification for each new application

3. Technical constraints

3.1 Architecture

- ✓ Responsive web application (compatible with mobile and desktop browsers)
- ✓ Backend with relational database
- ✓ Documented RESTful API (Swagger or equivalent)
- ✓ Secure authentication (JWT or server-side session)

3.2 Mapping

- ✓ Integration of an open-source mapping solution (Leaflet.js recommended)
- ✓ Map data: OpenStreetMap or equivalent
- ✓ Minimum geographic precision: district or municipality level

3.3 Personal data

- ✓ The collection and processing of location data must be covered by clear, accessible information notices
- ✓ Users' personal data must not be retained beyond the active usage period of the account
- ✓ An account deletion mechanism must be available

3.4 Performance

- ✓ Map load time: under 3 seconds on a standard connection
- ✓ The solution must support gradual scaling

4. Expected deliverables

Week 1: proof of concept (Friday project review)

- ✓ Map interface for browsing listings (no account required)
- ✓ Job-seeker and employer account creation
- ✓ Publication of at least one geolocated job listing
- ✓ Oral presentation: functional demo + chosen technical approach

Week 2: final version (Thursday technical review + Friday keynote)

- ✓ All features described in section 2 fully operational
- ✓ Functional employer dashboard
- ✓ Basic admin panel
- ✓ Technical documentation (installation, API)
- ✓ Project retrospective (successes, difficulties, improvements)

5. Points of attention

Published listings are the responsibility of the employer. The technical service provider is not responsible for the content of listings. A reporting system must allow users to flag fraudulent or non-compliant listings.

Document issued by the Digital and Innovation Directorate, Ministère du Job et Bonheur. Version pending validation before final distribution.
